

IN THE CLAIMS:

Please amend Claims 24, 27, 30-32, 36, 40, and 41, and add new Claims 42-49 as follows.

1-23. (Cancelled)

24. (Currently Amended) A video print system comprising:

reading means for reading, from a storage medium which stores plural still image information and time information included in each still image information, the still image information and the time information;

setting means for setting a period for designating a print target image; and

print means for printing the still image information including the time information between a first moment and a last moment of the period set by said setting means.

25. (Previously Presented) A video print system according to Claim 24, wherein size information for specifying a print size is attached to each of the plural image information, and said print means prints the image with the print size according to the size information attached to the image information read by said reading means.

26. (Previously Presented) A video print system according to Claim 24, wherein the storage medium is a tape-shaped storage medium.

27. (Currently Amended) A print instruction method comprising:

a reading step of reading, from a storage medium which stores plural still image information and time information included in each still image information, the still image information and the time information;

a setting step of setting a period for designating a print target image; and

a print instruction step of instructing the performing of a printing operation to print the still image information including the time information between a first moment and a last moment of the period set by said setting step.

28. (Previously Presented) A print instruction method according to Claim 27,

wherein size information for specifying a print size is attached to each of the plural image information, and the image printing is performed with the print size according to the size information attached to the image information read in said reading step.

29. (Previously Presented) A print instruction method according to Claim 28,

wherein the storage medium is a tape-shaped storage medium.

30. (Currently Amended) A recording medium on which a program to execute

a print instruction method is recorded, said method comprising:

a reading step of reading, from a storage medium which stores plural still image information and time information included in each still image information, the still image information and the time information;

a setting step of setting a period for designating a print target image; and
a print instruction step of instructing the performing of a printing operation for printing the still image information including the time information between a first moment and a last moment of the period set by said setting step.

31. (Currently Amended) A program to execute a print instruction method, comprising:

a reading step of reading, from a storage medium which stores plural still image information and time information included in each still image information, the still image information and the time information;

a setting step of setting a period for designating a print target image; and
a print instruction module for instructing the performing of a printing operation to print still image information including the time information between a first moment and a last moment of the period set by said setting step.

32. (Currently Amended) A print instruction apparatus comprising:
setting means for setting a period for designating a print target image; and
print instruction means for instructing to print, from among still image information stored in a storage medium, still image information including time information between a first moment and a last moment of the period set by said setting means.

33. (Previously Presented) A print instruction apparatus according to Claim 32, further comprising:

connection means for connecting said apparatus to a printer through a data bus;

and

reading means for reading the image information print-instructed by said print

instruction means from the storage medium,

wherein the image information read by said reading means is sent to the data

bus.

34. (Previously Presented) A print instruction apparatus according to Claim 32, wherein size information for specifying a print size is attached to each of the plural image information, and the image printing is performed with the print size according to the size information attached to the image information read by said reading means.

35. (Previously Presented) A print instruction apparatus according to Claim 32, wherein the storage medium is a tape-shaped storage medium.

36. (Currently Amended) A print instruction method of a print instruction apparatus, comprising:

a setting step of setting a period for designating a print target image; and

a print instruction step of instructing to print, from among still image information stored in a storage medium, still image information including time information between a first moment and a last moment of the period set by said setting step.

37. (Previously Presented) A print instruction method according to Claim 36, further comprising:

a connecting step of connecting the print instruction apparatus to a printer through a data bus; and

a reading step of reading the image information print-instructed in said print instruction step from the storage medium,

wherein the image information read in said reading step is sent to the data bus.

38. (Previously Presented) A print instruction method according to Claim 37, wherein size information for specifying a print size is attached to each of the plural image information, and the image printing is performed with the print size according to the size information attached to the image information read in said reading step.

39. (Previously Presented) A print instruction method according to Claim 36, wherein the storage medium is a tape-shaped storage medium.

40. (Currently Amended) A recording medium on which a program to execute a print instruction method is recorded, said method comprising:

a setting step of setting a period for designating a print target image; and
a print instruction step of instructing to print, from among still image information stored in a storage medium, still image information including time information between a first moment and a last moment of the period set by said setting step.

41. (Currently Amended) A program to execute a print instruction method, comprising:

a setting module for setting a period for designating a print target image; and
a print instruction module for instructing to print, from among still image information stored in a storage medium, still image information including time information between a first moment and a last moment of the period set by said setting module.

42. (New) A vide print system according to Claim 24, wherein said setting means sets the first moment and the last moment to set the period for designating the print target image.

43. (New) A print instruction method according to Claim 27, wherein said setting step sets the first moment and the last moment to set the period for designating the print target image.

44. (New) A recording medium according to Claim 30, wherein said setting step sets the first moment and the last moment to set the period for designating the print target image.

45. (New) A program according to Claim 31, wherein said setting step sets the first moment and the last moment to set the period for designating the print target image.

46. (New) A print instruction apparatus according to Claim 32, wherein said setting means sets the first moment and the last moment to set the period for designating the print target image.

47. (New) A print instruction method according to Claim 36, wherein said setting step sets the first moment and the last moment to set the period for designating the print target image.

48. (New) A recording medium according to Claim 40, wherein said setting step sets the first moment and the last moment to set the period for designating the print target image.

49. (New) A program according to Claim 41, wherein said setting module sets the first moment and the last moment to set the period for designating the print target image.
